

CHIPPER X

CHIPPER X2!

PROFESSIONAL CHIP MANAGEMENT SOLUTION

MORE THAN JUST A CHIPPER

We know the live game drill. We know the table staff work. Been there, done that. We are transforming our experience into everything we do. With each piece of our casino accessories, we try to make people's jobs easier during live games. It is no different with our new showpiece, ChipperX, the new casino device designed to be more than just a regular chipper.

The capabilities of this machine far exceed the sorting of chips alone. It provides casino management with detailed game statistics, helping them to make the right decisions in situations where it's needed most. With its reliable chip sorting, quick chip column swaps, twelve chip tracks, simple controls, a clear touchscreen, and many more it brings convenience to the table staff. Everything to maintain a quick game pace.

ULTIMATE
PERFORMANCE

APEX **CHIPPERX**

ChipperX, designed and produced by Apex Live Gaming, is a specialized device for sorting and managing chips. The device is easily controlled via a 7 "color TFT display with a touchscreen. It automatically sorts chips by value or colour into one of twelve designated chip columns. Each chip column can be individually tailored to sort and store a defined number of chip types (1 to 4). Any column, but only one at a time, can alternatively be used to store undefined unknown chips. Each column is automatically filled until full. Subsequently, the filled column automatically shuts off and remains off until the roulette table operator removes the chips.

TWELVE **COLUMNS**

ChipperX has a computing power that can quickly and accurately count, sort, and distribute up to 500 chips per minute.

DETAILED STATISTICS

ChipperX creates game statistics with a per-minute view. These are stored in the device's memory for one year.

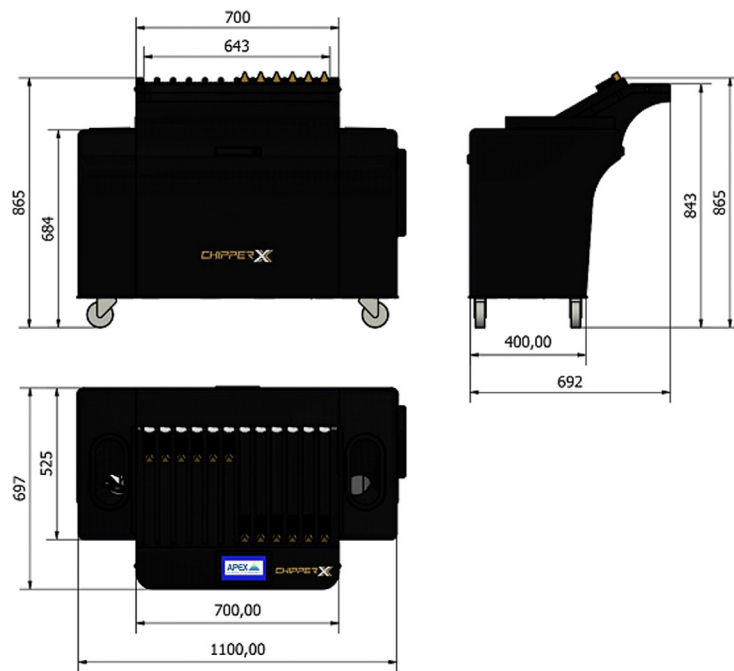

MATTE
BLACK

The elegant design makes ChipperX fit into any casino space, while its durable materials ensure easy care.

UVC
ACTIVE

ChipperX is equipped with a feature that keeps the chips hygienically safe.

FEATURES AND SPECIFICATIONS

- For left-hand and right-hand tables
- Sorts up over 500 chips per minute
- Ultra light and easy to maneuver
- Online diagnostics
- Easy to navigate menu
- Extra silent
- Quick column swap
- Chip count statistics
- Large touch screen
- Width is 1100mm
- Height is 800mm
- Depth is 690mm
- Weight without chips is 116kg
- Stand-by power consumption is 70W
- Sorting power consumption is 160W
- Power connection to a 230V or 110V

APEX

CHIPPERX2

ChipperX2, designed and produced by Apex Live Gaming, is a top-tier chip sorting machine, perfect for any croupier. It is incredibly easy to operate, extremely fast, and can sort chips ranging from 39mm to 43mm in a single track, eliminating the need to adjust the device for sorting a specific chip size. Its speed is truly unmatched thanks to a high-speed camera, top-notch motor, and the latest electronics that meet all current standards and requirements.

APEX

CHIPPERX2

The organization is ensured across ten tracks, and each can differentiate four distinct types of chips. Variations may include new vs. old chips, or dirty vs. clean chips. Each track can process chips from 39mm to 43mm simultaneously. One track can be set for unprogrammed types, although it is not mandatory. Chips are stored in tracks, and a slider, which includes a small integrated magnet sensed by the electronics, is used to extract stacks of 20 chips, ensuring that chips do not fall off the track. Each track has its own operation indicator to alert the operator of any malfunctions or if the track is full. For safe operation, each track has an integrated sensor that stops the machine when a hand approaches the moving part, ensuring operator safety.

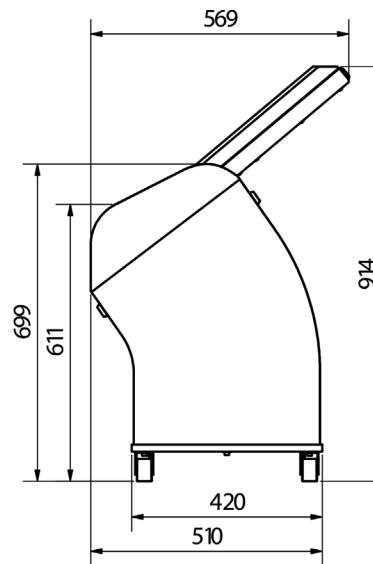

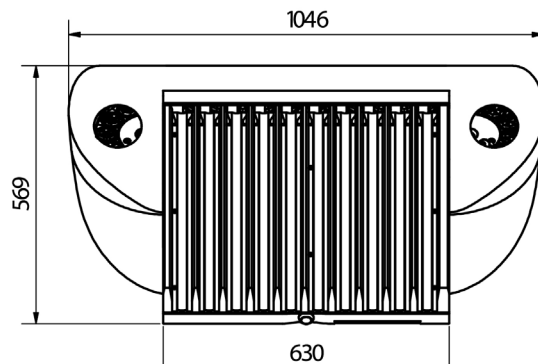

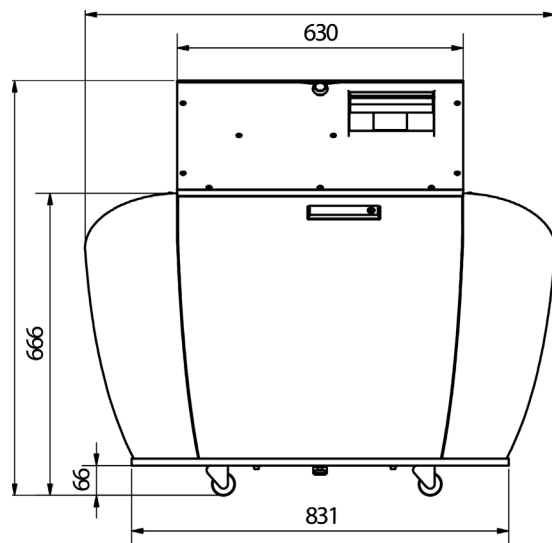

The dimensions of the ChipperX2 are so compact that it fits into any roulette table. If you have another type of sorter, it's not a problem. Simply replace the old machine with the ChipperX2. Its design minimizes interference in the croupiers' area, and the track width is adapted to pre-existing cuts in the tables, so no modifications are necessary. Extracting chips from the device is simple and organized into batches of 20, with the position of sorted chips ideally suited for both tall and short croupiers.
